Door and Millwork

Interior Door Catalog

A FAMILY LEGACY IN MILLWORK

For over 50 years, our family has been in the millwork business fostering a sense of community and home. Led by three generations of our family, we've evolved from a small local operation to a trusted brand, steadfastly upholding our core values while continuously adapting to meet our customers' needs.

Every door we craft represents more than an entryway—it's an invitation to warmth, your cherished memories, and enhancing the character of your home. Each product reflects our family's enduring legacy, capturing our unwavering commitment and the unique bond we share with our customers.

Understanding the value of personal connections sets us apart. We're more than a brand; we're your neighbors, your friends, and partners in the journey of transforming houses into homes, with exceptional door and millwork products.

As we look towards the future, we're deeply grateful for being part of your story.
With anticipation, we continue our mission, welcoming more families home and carrying our family legacy forward for generations to come.

*Custom Sizes Available

1-3/4" 20-Minute Sizes:
2/8 & 3/0

Construction and Benefits

Primed stile and rail doors are an excellent option for homeowners who want to achieve a sleek and polished look in their modern, traditional, or craftsman style homes. With architecturally precise layouts, defined panels, and sharp shadow lines, these doors offer an exceptional level of detail.

Advancements in the millwork industry have further enhanced the appeal of primed stile and rail doors. They are now a preferred choice among discerning homeowners who seek greater durability, strength, and longevity at a comparable price point to molded door alternatives.

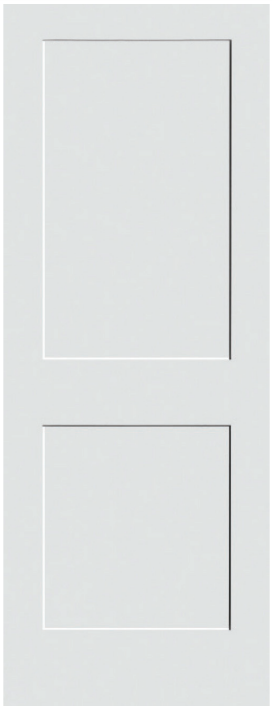

Features

- Dowel Pins: The traditional dowel pin construction method securely joins the stile and rail components together.
- Panel: For a smooth and stable finish with flat made of MDF.
- Rails: The rails also boast an engineered solid wood core, adding to the door's durability.
- Stiles: To ensure strength, stability, and reduced sound transmission, the stiles feature an engineered solid wood core.
- Veneer: The MDF veneer is permanently bonded to the engineered wood core, creating a superior paint surface that resists damage.
